

Information with Location

IMGS Location Publisher

Web Mapping Made Easy

IMGS Location Publisher is a user friendly spatial mapping and GIS solution that is used across the island of Ireland. This innovative solution allows organisations to add powerful interactive maps to public and enterprise websites.

With IMGS Location Publisher, organisations can configure maps to publish spatially referenced information organised into specific themes e.g. environment, recreation, planning, roads etc. Organisations can also publish static information, such as asset location and type, as well as real-time information, such as traffic congestion and engineer location.

This modern enterprise browser based solution for the capture and publication of spatial data can provide organisations with many benefits, including reduction in input errors, cost savings and decreased system maintenance.

Key Features

- Fully configurable for Intranet/ Internet deployment
- Interactive Mapping without programming or plug-ins
- Easy-to-use Intuitive Mapping Tools
- Online Data Capture Function
- “Find Nearest” Services
- Integrated Address and Feature Searching

Benefits

- Open Source - lower software licence costs
- Rapid deployment
- Independent of data format (one size fits all)
- No software development costs
- Improved public (customer) satisfaction

Why IMGS?

We are an Irish owned mapping and geographic information systems provider founded in 2002. We serve over 50 customers across the island of Ireland including local authorities, government agencies, utilities and communications organisations.

The key to our success is that we stay focused on the customer and the customer's needs and deliver solutions to meet those needs. Customer satisfaction is our number one priority and we work very closely with our customers to deliver a solution that is just right for them. Our customers know that they can rely on us for support, whenever they need it.
