

ERDAS IMAGINE

ERDAS IMAGINE is a versatile and comprehensive application that combines geospatial image processing, GIS tools, remote sensing, photogrammetry, LiDAR analysis and radar processing in one solution.

Capabilities of the application includes an intuitive ribbon interface, the ability to convert more than 190 image formats into all major file formats, spatial modelling with raster and vector operators with real-time results preview, a high-performance mosaicking and a variety of change detection tools.

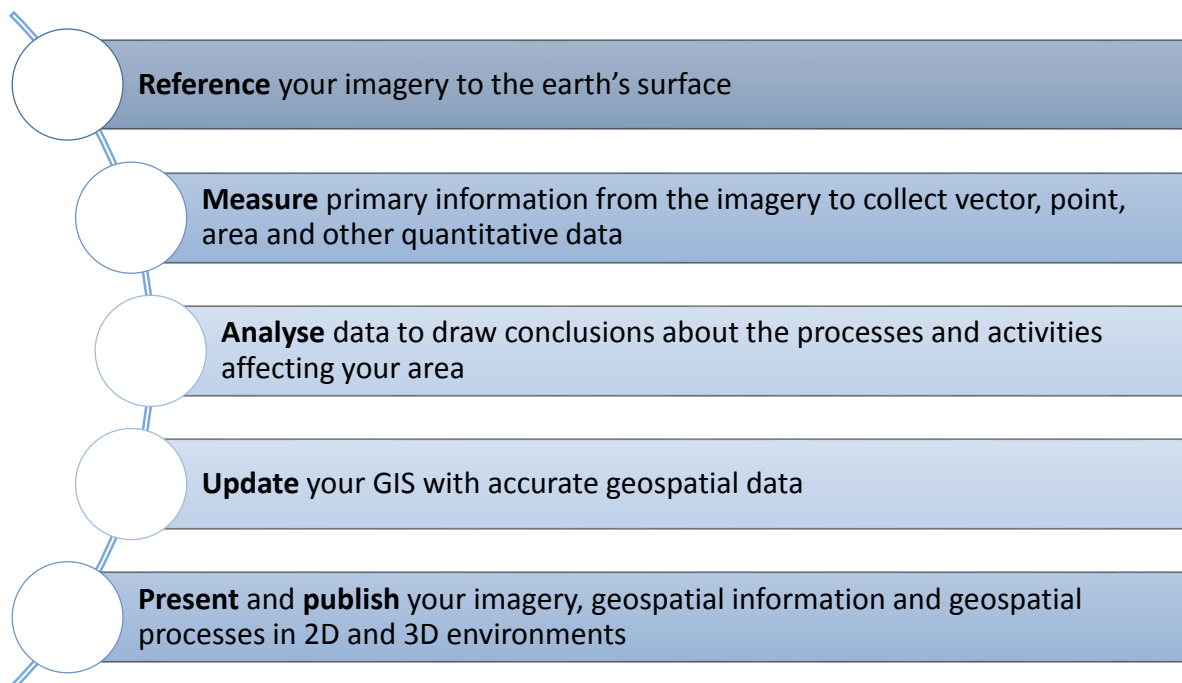

ERDAS IMAGINE is offered within the PRODUCER SUITE of Hexagon Geospatial's Power Portfolio. Easily extend remote sensing workflows, and greatly expand capabilities and target specific customer demands by plugging your own unique operations into customizable models in ERDAS IMAGINE.

The ERDAS IMAGINE Product Suite has a tier to suit every organisation's needs:

- IMAGINE Essentials – a powerful, low cost image & LIDAR mapping and visualisation tool
- IMAGINE Advantage – an extension of capabilities of IMAGINE Essentials
- IMAGINE Professional – the most sophisticated software for geographic imaging

Why ERDAS IMAGINE?

IMGS and Hexagon Geospatial

IMGS is an Irish owned mapping and geographic information systems provider founded in 2002. We serve over 50 customers across the island of Ireland including local authorities, government agencies, utilities and communications organisations. Customer satisfaction is our number one priority and we work very closely with our customers to deliver a solution that is just right for them.

Hexagon Geospatial was formed in 2014, when the Intergraph geospatial technology portfolio was split out from under the Security, Government and Infrastructure division to create the Hexagon Geospatial division. Mladen Stojic is the president of this newly created division, after being the Vice President of the Geospatial division for Intergraph, and with 15 years of combined experience across Hexagon companies.
