

GeoMedia

GeoMedia is a comprehensive and dynamic GIS, which extracts compelling intelligence from geospatial data and integrates it to present actionable information.

- **Direct Access to Geospatial Data**
- **Sophisticated Query and Analysis**
- **Data Validation**

GeoMedia is offered within the PRODUCER SUITE of the Power Portfolio. The Producer Suite empowers you to collect, process, analyse and understand raw geospatial data, and ultimately deliver usable information. This includes Hexagon Geospatial's desktop-based GIS, remote sensing, and photogrammetry offerings.

GeoMedia has a flexible design that provides a high level of performance, regardless of the size of your organisation, whether you have one or hundreds of users. GeoMedia libraries allows organisations to work with and use their data in a consistent manner by providing users with the ability to share data to other users in a given department or organisation.

As GeoMedia works with data sources directly, data is always up-to-date and as the data changes, GeoMedia automatically revises the database, so organisations always have access to the most current information.

Key features

- Expansive and detailed querying possible
- Quick and easy to move from one method of creating feature geometry to another
- Users can connect straight to their spatially enabled database that they already use, i.e. Oracle, SQL Server, etc. without the need to use importers or converters
- Collect, visualise and analyse in 3D

IMGS and Hexagon Geospatial

IMGS is an Irish owned mapping and geographic information systems provider founded in 2002. We serve over 50 customers across the island of Ireland including local authorities, government agencies, utilities and communications organisations. Customer satisfaction is our number one priority and we work very closely with our customers to deliver a solution that is just right for them.

Hexagon Geospatial was formed in 2014, when the Intergraph geospatial technology portfolio was split from under the Security, Government and Infrastructure division to create Hexagon Geospatial. Mladen Stojic is the president of this newly created division, after being the Vice President of the Geospatial division for Intergraph and with 15 years of combined experience across Hexagon companies.
