

Powering Data Insights

IMGS Pre-Planning Map Portal

The IMGS Pre-Planning Map Portal provides automated reports to pre-planning queries received from the public. Each individual query generates a Pre-Planning Analysis Report, which provides guidance to the citizen on the likelihood of planning permission being granted at the location.

Features:

- Easy to use map interface to capture the proposed planning location.
- Reports driven by FME Workspace without the need for programming which are fully configurable for each Local Authority.
- Multiple mapping background support, as the Mapping Portal can be used with ESRI, Google Maps etc.
- Fast, easily accessible solution that runs across all devices.

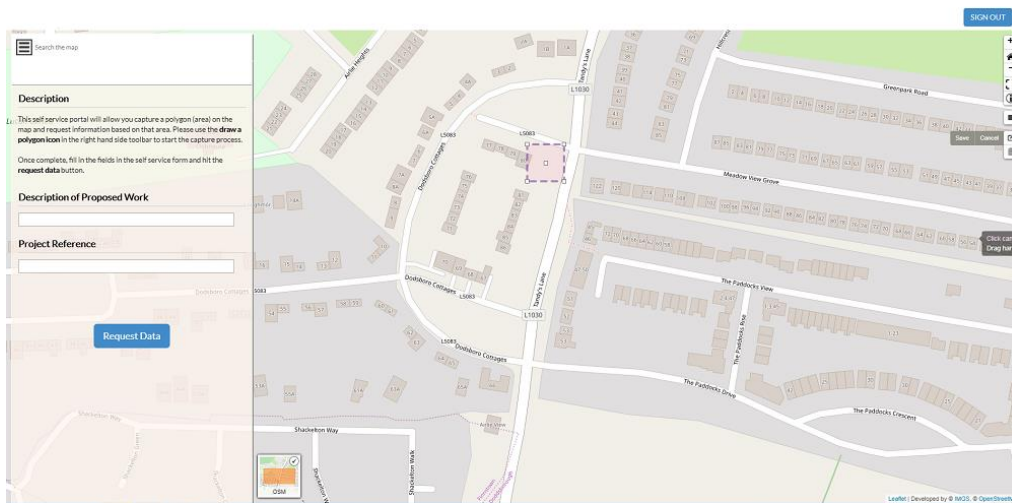

Benefits:

- Easy to Configure and Deploy.
- Automates the pre-planning process, thereby freeing up Local Authority Planning Staff to focus on other tasks.
- Improved Customer Service.

Powering Data Insights

Pre-planning Map Portal Data – How it works:

Members of the public highlight their area of interest using a polygon drawing tool and input personal details as determined by their local authority e.g. name, address and description of works to be carried out.

Pre-Planning Analysis Report:

Once the data sets are populated a Pre-Planning Analysis Report is produced:

Planning Analysis Report	
Planning Reference	Application Details D05A/0530
